Abstracts

The global 3D CNC Steel Bar Bending Machine market size is predicted to grow from US$ 279 million in 2025 to US$ 361 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

In 2025, the global production of 3d cnc steel bar bending machines reached 43,869 units, with an average selling price of $6,500 per unit. The global annual production capacity of these machines is approximately 60,000 units, and the gross profit margin is about 26.2%. 3D CNC Steel Bar Bending Machines are highly automated steel bar processing equipment that can automatically complete bending, stirrup fabrication, and other complex shape processing according to preset programs. "3D" refers to the ability to bend in three?dimensional space, producing various intricate three?dimensional shapes. "CNC" stands for computer numerical control technology, enabling precise and efficient automated processing. The upstream of 3d cnc steel bar bending machines includes servo motors, motion control systems, and hydraulic/pneumatic systems, among others. The midstream consists of manufacturers of these machines, while the downstream mainly covers applications in the construction, machinery, and rail transit industries.

Currently, the market for 3d cnc steel bar bending machines is in a phase of steady growth, driven by their high precision, high efficiency, and ability to process complex three?dimensional shapes, which have led to increasingly widespread applications in infrastructure construction such as precast concrete components, bridges and tunnels, and rail transit. As the construction industry continues to demand more automated and intelligent processing equipment, and with rising labor costs, the market penetration of these machines is gradually increasing. At the same time, the industry faces challenges including product homogenisation, accelerated technological iteration, and fluctuating
