The global 3D Criminal Investigation and Analysis System market size is predicted to grow from US$ 504 million in 2025 to US$ 774 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

A 3D Criminal Investigation and Analysis System is an advanced forensic technology platform that integrates 3D scanning, photogrammetry, computer vision, and data visualization to digitally reconstruct crime scenes and support investigative analysis. By capturing high-precision spatial data from a scene, such as the layout of objects, trajectories, evidence placement, and environmental details, the system generates an accurate three-dimensional model that preserves the site virtually. Investigators can then interact with the model to examine evidence relationships, simulate scenarios, measure distances, and visualize perspectives that may not be possible in real life. Beyond fieldwork, these systems also provide tools for case analysis, suspect reconstruction, and courtroom demonstration, ensuring evidence is preserved and presented in an intuitive, scientific, and legally robust format. This enhances the accuracy, efficiency, and credibility of criminal investigations while reducing reliance on traditional two-dimensional photographs and sketches.

United States market for 3D Criminal Investigation and Analysis System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
