Abstracts

The global 3D Dental Extraoral Imaging Systems market size is predicted to grow from US\$ 726 million in 2025 to US\$ 1238 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

3D Dental Extraoral Imaging Systems are professional dental diagnostic imaging systems built primarily around cone-beam computed tomography (CBCT) technology to acquire, reconstruct, visualize, and analyze three-dimensional anatomical data of the teeth, alveolar structures, maxilla and mandible, temporomandibular joints, and related oral and maxillofacial regions from outside the oral cavity. A typical system integrates an X-ray generator, cone-shaped X-ray beam, digital detector, rotating gantry, patient-positioning components, image-acquisition workstation, and three-dimensional reconstruction and diagnostic software. During an examination, the X-ray source and detector rotate around the region of interest to obtain multiple projection images, which are computationally reconstructed into volumetric 3D data. Commercial systems are commonly offered either as dedicated CBCT platforms or as multimodal extraoral imaging units integrating CBCT with panoramic and, in many configurations, cephalometric imaging capabilities. Key technical specifications include field of view (FOV), voxel size, spatial resolution, tube voltage and current, detector performance, scan time, radiation dose, image reconstruction quality, and motion- and metal-artifact correction capabilities. These systems support a broad range of dental and oral-maxillofacial workflows, including implant planning, endodontic diagnosis, orthodontic assessment, impacted-tooth evaluation, periodontal and bone-volume assessment, oral and maxillofacial surgery, temporomandibular joint evaluation, airway analysis, and other clinical procedures requiring accurate three-dimensional anatomical information.

Based on our research, 3D Dental Extraoral Imaging Systems have evolved from

specialized equipment primarily valued for adding three-dimensional diagnostic capability into a fundamental imaging gateway within the digital dentistry workflow. The industry is characterized by a mature underlying CBCT technology base, while application penetration and product configurations continue to advance. Future market growth is expected to be driven less by simple equipment price increases and more by continued expansion of the global installed base, the replacement cycle of earlier-generation CBCT systems, increasing utilization of 3D imaging in implantology and endodontics, higher equipment penetration among dental clinics in developing markets, and a growing share of mid- to high-end large-FOV and multimodal imaging systems.

From the supply-side perspective, Europe, South Korea, Japan, China, and North America represent the principal technology and manufacturing clusters for the industry. Europe is characterized by relatively complex relationships among corporate groups, brands, and manufacturing platforms; South Korean manufacturers generally demonstrate strong export orientation; Japanese suppliers benefit from long-standing imaging technology accumulation and specialized product expertise; while China features both established leading manufacturers and a relatively broad base of small and medium-sized OEMs. Competitive barriers have also expanded beyond the basic ability to manufacture CBCT hardware and increasingly encompass detector and imaging-chain optimization, low-dose imaging capabilities, reconstruction algorithms, software ecosystems, clinical workflow integration, international regulatory approvals, and global after-sales service networks.

From a product-development perspective, industry upgrading is shifting from a narrow focus on improving spatial resolution toward system-level competition involving FOV coverage, radiation dose control, artifact correction, multimodal imaging integration, and AI-assisted diagnosis and treatment planning. The FDA continues to emphasize that Dental CBCT examinations should be clinically justified and performed using the lowest radiation dose reasonably capable of achieving the required diagnostic objective, making low-dose protocols and the optimization of scanning parameters according to patient size and clinical indication long-term product-development priorities. In China, the current YY/T 0795-2022 standard has also established dedicated specifications covering terminology, system composition, technical requirements, and testing methods for oral and maxillofacial CBCT equipment, supporting the continued standardization of equipment quality control and imaging stability. On the product side, systems are continuing to evolve toward more flexible combinations of small, medium, and large fields of view. For example, the Planmeca Viso G1 introduced in 2025 provides a maximum FOV of 11 × 11 cm while integrating 3D imaging, panoramic imaging, TMJ imaging, and optional cephalometric capabilities within a single platform. At the same

time, AI is moving beyond standalone post-processing functions and becoming increasingly embedded in the imaging workflow. Current software platforms can automatically perform CBCT anatomical segmentation, mandibular nerve identification, registration of CBCT and intraoral scan data, implant planning, and three-dimensional cephalometric analysis. Hardware specifications will remain important, but the overall efficiency of an integrated “imaging system + algorithms + clinical workflow” is expected to become an increasingly important source of product value and differentiation.

From the perspective of industry developments and the future competitive landscape, the 2025–2026 period has shown three concurrent trends: consolidation through mergers and acquisitions, regional shifts in manufacturing and supply chains, and the entry of new manufacturing participants. Following Alliage’s acquisition and integration of the PreXion business in 2025, PreXion was formally incorporated into the Alliage Group and its manufacturing operations were transferred to Brazil, indicating that the Dental CBCT manufacturing footprint is expanding beyond its traditional centers in Japan, Europe, and South Korea into Latin America. In terms of new entrants, Japan-based medXion Technologies received U.S. FDA 510(k) clearance for the medXion NEXUS Dental Computed Tomography system on May 15, 2026, while the Dental X-ray System developed by China-based Changzhou Boen Zhongding received an FDA substantially equivalent determination on June 11, 2026. These developments indicate that emerging Asian manufacturers continue to enter internationally regulated markets and that the global competitive landscape remains dynamic rather than closed.
