The 3D flexible cutting machine is an advanced laser cutting equipment. The 3D flexible cutting machine integrates domestic fiber lasers, 3D high-precision six-axis robots and high-flexibility technology into an intelligent optomechanical product. The equipment consists of a dedicated fiber laser cutting head, a high-precision capacitive tracking system, a fiber laser and an industrial robot system. After the laser is generated by the laser, it is transmitted by the reflector and irradiated onto the object to be processed through the focusing mirror, so that the object (surface) is subjected to strong thermal energy and the temperature increases sharply, causing the point to melt or vaporize rapidly due to the high temperature, and the processing purpose is achieved in conjunction with the running trajectory of the laser head.

The global 3D Flexible Cutting Machine market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
