The global 3D Induction Smart Electric Toothbrush market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The 3D induction smart electric toothbrush is a modern oral care product that combines the advantages of electric toothbrushes and smart technology. The toothbrush uses advanced 3D sensing technology and can intelligently adjust according to the user's usage habits and dental conditions.

The 3D induction smart electric toothbrush can monitor the user's brushing posture, brushing time and brushing intensity in real time. At the same time, it can also automatically adjust the vibration frequency and intensity to ensure thorough cleaning of food residues and bacteria on the tooth surface and between the teeth. In addition, 3D induction smart electric toothbrushes usually have other practical functions, such as regularly reminding users of the brushing time of each part, recording brushing data and generating reports, and connecting to mobile APPs for remote control. These functions are designed to help users perform better oral care and improve oral health.
