The global 3D Integrated Adapter Board market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Three-dimensional integrated interposer (3D-IC) is an advanced semiconductor packaging technology that forms a tightly integrated three-dimensional structure by stacking multiple chips in the vertical direction and connecting them together through interconnect technology. This technology allows the integration of multiple functional modules or processor cores in one package, thereby increasing the chip's functional density and performance. By stacking chips vertically, the three-dimensional integrated adapter board can reduce the distance of signal transmission between chips, reduce power consumption, and provide higher bandwidth and lower signal delay. This technology has broad application prospects in fields such as high-performance computing, mobile devices, the Internet of Things, and artificial intelligence.

Three-dimensional integrated interposer (3D-IC) is an advanced integrated circuit packaging technology that vertically stacks and interconnects multiple chip layers to achieve highly integrated, high-performance and low-power electronic systems. This technology has attracted widespread attention in the field of integrated circuit design and packaging and is regarded as an important development direction for next-generation semiconductor packaging and system integration. With the continuous advancement of process technology and packaging technology, the manufacturing cost of three-dimensional integrated adapter boards is gradually reduced and the performance level is continuously improved. It is expected to become a key component of the next generation of high-performance electronic systems. As a disruptive packaging technology, the three-dimensional integrated adapter board has broad

application prospects and development space. It will become an important technical means for electronic system integration and packaging in the future, providing important information for the development of the digital age and the realization of intelligent life. Support and security.
