3D medical image processing software is a computer program specifically designed for processing and analyzing medical image data (such as CT, MRI, ultrasound, etc.) to generate three-dimensional models or visualizations. It is commonly used in clinical diagnosis, surgical planning, and other applications. By acquiring two-dimensional tomographic images through various medical imaging devices (CT, MRI, etc.), the software performs image segmentation and three-dimensional reconstruction to form visualizable models. Based on these models, data analysis can be conducted or the models can be exported for functions such as 3D printing.
