Abstracts

The global 3D Modeling Type AIGC market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

3D Modeling AIGC, or the application of AI Generated Content in the field of 3D modeling, refers to the process of using artificial intelligence technology to automatically generate or assist in the generation of 3D models. This technology combines advanced technologies from multiple fields such as deep learning, computer vision, and graphics, and can automatically build a 3D model with a three-dimensional and realistic feel based on input data (such as pictures, text descriptions, etc.). 3D Modeling AIGC not only improves the efficiency of 3D model production, but also lowers the production threshold, allowing non-professionals to easily create high-quality 3D models.

The global AIGC market will grow at a compound annual growth rate of more than 30% in the next decade.

China will become the main growth area in the Asia-Pacific region.

3D AIGC has a gap with artificial models in terms of fineness, accuracy, rendering resolution, etc., and is not controllable enough, making it difficult to highly customize 3D models according to requirements. These technical bottlenecks limit the commercialization of 3D modeling AIGC.

The government has formulated a series of technical standards and specifications related to 3D digital modeling, which provide reference basis and evaluation criteria for the development of 3D modeling AIGC.

At present, there are many 3D modeling AIGC products and solutions on the market, but the overall technology is not yet mature.
