The global 3D-Printed Acetabular Cup market size is predicted to grow from US\$ 183 million in 2025 to US\$ 308 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

3D printed acetabular cup is an advanced implant widely used in the field of orthopedics, especially in hip replacement surgery in recent years. 3D printed acetabular cup uses advanced rapid prototyping technology, namely 3D printing technology, to extract accurate three-dimensional data of the acetabulum based on the patient's imaging data such as CT or MRI. Then, using this data, medical metal materials such as titanium alloy are stacked layer by layer through 3D printing equipment to form an acetabular cup that perfectly matches the patient's acetabulum. This manufacturing method not only achieves personalized customization, but also greatly improves the accuracy and adaptability of the acetabular cup.
