3D printer for jewelry is a kind of 3D printer for jewellers in jewelry casting. Most of them are based on investment casting, for high cost of metal 3D printing. With the digital workflow, jewelers use CAD software tools to create the designs digitally and a high-resolution 3D printer to produce the 3D printed patterns that can then be cast in the mold. After burnout of the positive pattern, the process follows the same path as traditional investment casting. 3D printing enables jewellers to conceptualise and prototype rings quickly. Digital tools can be used to personalise creations while a customer waits. 3D printers can manufacture dimensionally accurate wax casts, which when processed, result in retail-grade final pieces.
