The Nozzle is the Mechanical Part of the 3D Printer That Extrudes the Filament. It Conducts and Blocks the Heat Energy Provided by the Heated Cartridge to the Filament, Melting It. Three Key Features Are Integral to Nozzle Design: Size, Material and Internal Diameter. The Larger the Nozzle, the Greater the Mass and Surface Area Available to Transfer Heat to the Filament, Making the Process More Efficient and Enabling Higher Extrusion Speeds to Be Achieved. Heat Transfer is Also Related to Nozzle Material, As Each Material Conducts Energy Differently Depending on Its Properties. the Internal Diameter of the Nozzle Affects the Amount of Plastic Extruded Per Second and Also Determines the Maximum Extrusion Speed. the Internal Diameter is Also Related to the Accuracy of the Final Part, with Smaller Diameters Allowing Thinner Layers and Walls to Be Printed.
