The global 3D Printing Resin Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

3D Printing Resin Machines use photopolymerisation technology, which means that the liquid photopolymer is cured by irradiation with ultraviolet light. The UV light penetrates the transparent barrel, eventually forming the desired model. With each layer printed, the forming platform is lowered to its initial position and the print fixed to the platform is raised as if from a pool of resin.
