A 3D running gait analysis system is a high-end biomechanical device used to capture and analyze runners' movement patterns in three dimensions. The system measures joint angles, stride length, foot pressure, and gait symmetry using multiple cameras, sensors, and a pressure platform. It is widely used in sports science, rehabilitation therapy, clinical gait assessment, and footwear research to optimize athletic performance and prevent injuries. The upstream of the industry chain includes motion sensors, high-speed cameras, computing hardware, and software algorithms; the midstream involves system assembly, calibration, data processing software integration, and testing; downstream applications cover sports research institutions, rehabilitation clinics, hospitals, universities, and sports training centers, providing training, maintenance, and performance consulting services. In 2025, the global production volume of 3D running gait analysis systems was approximately 7,667 units, with an average market price of approximately US\$18,000 per unit. The gross profit margin of major manufacturers in the industry ranged from approximately 40% to 55%. In 2025, the global production capacity of 3D running gait analysis systems was approximately 9,200 units.
