A 3D scanning microscope is a type of microscope that uses advanced imaging techniques to generate three-dimensional images of microscopic samples. These microscopes typically use laser or focused ion beam technology to scan the surface of a sample and create a high-resolution image that can be viewed in three dimensions. The resulting data can be used to analyze the surface structure and topography of the sample, as well as to quantify properties such as roughness, texture, and porosity. 3D scanning microscopes are used in a variety of scientific fields, including materials

science, biology, and nanotechnology.
