The global 3D Scanning Structured Light Source market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A 3D Scanning Structured Light Source is a technology used in 3D scanning to capture the geometry of objects with high precision. The basic principle involves projecting a series of light patterns, usually stripes or grids, onto the surface of an object. A camera or sensor then captures the way these patterns deform as they hit the object's surface. By analyzing these deformations, the system can reconstruct the 3D shape of the object.
