The global 3D Six-axis Laser Cutting Equipment market size is predicted to grow from US$ 225 million in 2025 to US$ 333 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

The three-dimensional six-axis laser cutting equipment is an advanced processing equipment that integrates a six-axis industrial robot and a high-precision laser system. The six-axis linkage of the robot arm realizes the flexible positioning and trajectory control of the laser beam in three-dimensional space. Its core lies in integrating the laser cutting head at the end of the robot arm, combined with a specially designed lightweight three-dimensional anti-collision cutting head, which can perform multi-angle dynamic cutting of complex curved workpieces, support 2D/3D composite processing mode, and meet the flexible production needs of small and medium batches. The equipment adopts an intelligent control system and high-precision sensors, and adjusts the cutting head posture in real time through the robot kinematic algorithm to ensure that the laser is always perpendicular to the workpiece surface, thereby obtaining excellent cutting quality. Its processing range covers a variety of three-dimensional workpieces such as automotive sheet metal covers, special-shaped pipes, composite materials, etc. It can replace traditional stamping and trimming molds, significantly shorten the R&D cycle and reduce manufacturing costs. It is a key technical equipment for achieving efficient and precise processing in the field of modern intelligent manufacturing.
