## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The global 3D Sonar market size is predicted to grow from US\$ 1391 million in 2025 to US\$ 2206 million in 2031; it is expected to grow at a CAGR of 8.0% from 2025 to 2031.

3D Sonar shows fish and sonar information in 3 dimensions. It uses the hull unit of your existing sonar but then processes the information in a unique way to show fish, peaks and sea floor data in a 3 dimensional “real world” view.

3D sonar systems are widely used in underwater mapping and exploration activities, such as oceanography, hydrographic surveys, offshore drilling, and underwater archaeology. As the demand for detailed and accurate underwater mapping increases, the market for 3D sonar systems is expected to expand. Technological advancements have led to the development of more advanced and capable 3D sonar systems. These systems now offer higher resolution, increased range, and improved imaging capabilities. Additionally, the integration of other technologies, such as GPS, motion sensors, and artificial intelligence, further enhances the performance of 3D sonar systems. As the technology continues to evolve, the market for 3D sonar systems is expected to grow. The 3D sonar market is expected to grow due to increasing applications in underwater mapping and exploration, advancements in technology, defense and maritime security applications, growing demand from the oil and gas industry, rising adoption in AUVs, and integration with data analytics and visualization software.
