The global 3D Structured Light Face Recognition Modules market size is predicted to grow from US$ 338 million in 2025 to US$ 602 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

The 3D structured light face recognition module is a modular device that integrates a 3D structured light sensor, an image processing chip, a face recognition algorithm, and a communication module to achieve high-precision three-dimensional face recognition. It projects a specific light pattern (such as stripes, dots, etc.) onto the surface of the face, and then uses a camera to capture the reflected light pattern to calculate the three-dimensional coordinates of the face, thereby achieving high-precision identity authentication.
