Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the 3D Vapor Chambers market.

3D Vapor Chamber is a composite product of standard vapor chamber and heat pipe. The design aims to combine the advantages of heat pipe and vapor chamber. One part is the chamber of the vapor chamber, and the other part is the pipe of the heat pipe. The two parts are not only connected to the space, but also connected through the wick structure, so the steam can flow from the chamber to the pipe, and the fluid can also flow from the pipe back to the chamber. , the external joints of the 3D VC are connected through diffusion bonding. Compared with traditional vapor chambers, 3D VC can dissipate more heat. In this way, it can handle more than 300W of power under a smaller module size design without causing an excessive increase in server size.
