A video laparoscope is an instrument with a tiny camera. Laparoscopic surgery is surgery performed using a laparoscope and its associated instruments. Use a cold light source to provide illumination, insert a laparoscopic lens (3-10mm in diameter) into the abdominal cavity, use digital camera technology to make the images captured by the laparoscopic lens transmit to the post-stage signal processing system through the optical fiber, and display it in real time on a dedicated monitor. device. The electronic laparoscope is composed of a pneumoperitoneum forming system, a camera imaging system, a power system and a flushing-suction system. Different from traditional surgery, laparoscopic surgery does not require laparotomy, and doctors perform surgery under direct vision with the help of a TV imaging system, which has dual effects of surgery and treatment. Laparoscopic technology integrates inspection, diagnosis,

surgery, and treatment, and can be used according to the needs of the disease.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
