## Abstracts

The global 3D Xpoint market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The 3D XPoint structure is very simple. It consists of a selector and memory cell, which sit in between a word-line and bit-line (hence the 'cross-point' name). Applying a specific voltage on the word-line and bit-line will activate a single selector and enable the cell underneath to be either written or read.
