The global 4-Core Air Conditioner Connection Cable market size is predicted to grow from US\$ 419 million in 2025 to US\$ 557 million in 2032; it is expected to grow at a CAGR of 2.9% from 2026 to 2032.

A 4-core air conditioner connector refers to a connecting wire or cable assembly for air conditioners containing four conductor cores. It is primarily used for power transmission, signal control, and grounding connections between the indoor and outdoor units of an air conditioner. Its structure typically consists of a copper conductor, an insulation layer, and a sheath. The outer sheath can be made of PVC, rubber, or other weather-resistant materials to withstand temperature changes, humid environments, and certain mechanical stresses during air conditioner operation. 4-core connectors are commonly found in household split-type air conditioners, cooling and heating air conditioners, and small commercial air conditioners. Depending on the air conditioner design, they can handle the connection functions of the live wire, neutral wire, control wire, and ground wire, making them an important component for ensuring coordinated operation of the indoor and outdoor units and safe electricity use. In 2025, the global demand for air conditioner rubber-sheathed connectors was approximately 154.4482 million units, with an average price of approximately US\$2.78 per unit.

In recent years, with the continuous development of the global air conditioning industry and the increasing trend of upgrading consumer spending, the market demand for air conditioning connection cables, as an important supporting component of air conditioning systems, has maintained steady growth. These products are mainly used for power and control signal transmission between indoor and outdoor units. They feature high temperature resistance, bending resistance, strong weather resistance, and stable insulation performance, making them a crucial basic material for ensuring the

safe and stable operation of air conditioners. Against the backdrop of increasing global air conditioning ownership and the rapid popularization of energy-saving air conditioners, the air conditioning connection cable market is experiencing continued development opportunities.

With the increasing air conditioning penetration rate in emerging markets and the increased demand brought about by high-temperature climates, global air conditioner shipments have maintained steady growth, driving a corresponding expansion in the demand for supporting connection cables. Simultaneously, the rapid development of inverter and smart air conditioners has placed higher demands on the voltage resistance, anti-interference capabilities, and long-term stability of connection cables, pushing products towards higher performance.

In terms of product structure, 3-core, 4-core, and 5-core connection cables are the main types, with 4-core products widely used in both heating and cooling air conditioners. Functionally, the products mainly include power connection cables and signal control connection cables. In terms of materials, copper conductors are primarily used with PVC or rubber insulation sheaths. Meanwhile, some high-end products are gradually adopting low-smoke, halogen-free, and environmentally friendly materials to meet stricter safety and environmental requirements. Technologically, the industry is moving towards high-temperature resistance, high flexibility, and lightweight design to meet the long-term stable operation requirements of air conditioning systems.

In terms of the industry chain, upstream suppliers include copper and rubber material suppliers, midstream manufacturers are air conditioning connection cable manufacturers, and downstream are air conditioning unit manufacturers and home appliance component suppliers. The industry as a whole exhibits a high degree of linkage with the air conditioning industry. Air conditioning brand companies typically place high demands on suppliers' product quality, stable supply capabilities, and cost control. With the increasing concentration of the air conditioning industry, leading connection cable manufacturers have formed stable cooperative relationships with large home appliance companies.

From a regional market perspective, China is the world's largest production and consumption market for air conditioning connection cables, occupying a core global position due to its complete air conditioning industry chain and manufacturing advantages. The Southeast Asian market is growing rapidly driven by air conditioning production capacity transfer and climate demand. The North American and European markets place greater emphasis on product safety certification and environmental

standards. Overall, the global market presents a development pattern of 'manufacturing concentrated in Asia, demand covering the globe.'

Looking ahead, the global air conditioner connection cable market will be driven by three core factors: first, continued growth in global air conditioner demand; second, the upgrading of inverter and smart air conditioners driving increased demand for high-performance connections; and third, continuously improving environmental and safety standards. Market growth is not only reflected in the expansion of supporting demand, but also in the value growth brought about by the increased proportion of high-end and environmentally friendly products.
