4-Methylbenzaldehyde is an important organic compound that appears as a colorless or pale yellow transparent liquid at room temperature, with a distinctive odor similar to almonds or flowers. This compound belongs to the aromatic aldehyde family and is primarily used as an intermediate in organic synthesis for the production of fragrances, pharmaceuticals, and dyes.

The upstream core raw material mainly comes from p-xylene in the petrochemical system, and its core preparation method involves the catalytic oxidation of p-xylene. The midstream stage involves the purification and classification of 4-methylbenzaldehyde. Downstream applications are highly diversified, primarily covering pharmaceutical intermediates, pesticide chemicals, and fragrances.

Global sales in 2025 were approximately 5,000 tons, with an average selling price of \$6,031 per ton. The industry's gross profit margin is between 25% and 30%.
