Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

4-Stroke engine oil is a type of lubricant specifically formulated for use in 4-stroke internal combustion engines, which are commonly found in motorcycles, lawnmowers, and small vehicles. In a 4-stroke engine, the oil serves multiple purposes: it lubricates moving parts to reduce friction and wear, cools the engine by dissipating heat, and cleans the engine by carrying away contaminants and deposits. Unlike 2-stroke engines, where the oil is mixed with fuel and burned during operation, 4-stroke engine oil remains separate and is circulated throughout the engine, typically collected in a sump and filtered for reuse. This type of oil is designed to meet specific performance standards, including resistance to thermal breakdown, oxidation, and maintaining viscosity across a range of temperatures.

The global 4-Stroke Engine Oil market size is projected to grow from US\$ 2185 million in 2024 to US\$ 2740 million in 2030; it is expected to grow at a CAGR of 3.8% from 2024 to 2030.
