The 4680 large cylindrical battery structural parts are quite different from the square battery structural parts, and are similar to the 2170 small cylindrical battery structural parts. There are three main changes between the 4680 battery structural parts and the 2170 battery structural parts. One is the thermal and electrical separation, the other is the addition of a current collecting plate, and the third is the increase in wall thickness. 4680 large cylindrical power battery structural parts use steel shells. For 4680 batteries, stamping and stretching are still the mainstream production process. However, due to changes in size and materials of 4680, the equipment needs to have greater stamping force and greater The maximum drawing height requires increased processing capabilities of stamping equipment.

The global 4680 Lithium Battery Structural Parts market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
