The global 4D-DIA Proteomics Service market size is predicted to grow from US\$ 2499 million in 2025 to US\$ 5379 million in 2032; it is expected to grow at a CAGR of 11.8% from 2026 to 2032.

A new generation of 4D-DIA proteomics technology combines 4D proteomics, which added ion mobility as the fourth separation dimension to traditional LC-MS/MS (retention time, m/z and MS/MS fingerprint), with data independent acquisition (DIA) strategy, which avoids data imbalance caused by randomness by realizing "lossless acquisition" of all possible data. 4D-DIA holds significant promise in biomedical research, particularly for discovering disease biomarkers, screening drug targets, and conducting functional proteomics studies. As the technology evolves, 4D-DIA is expected to continue driving advancements in proteomics. 4D-DIA represents a state-of-the-art quantitative proteomics technique. Its ability to combine multidimensional separation with high-precision quantification is positioning it as a critical tool in the exploration of complex biological systems.
