## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

4D millimeter wave radar is an upgraded version of traditional millimeter wave radar. 4D refers to the four dimensions of speed, distance, horizontal angle, and vertical height. Compared with traditional 3D millimeter wave radar, 4D millimeter wave radar increases 'height' detection and has higher resolution and accuracy. With the support of artificial intelligence technology, more intelligent perception and tracking can be achieved, thereby providing more reliable data support for fields such as autonomous driving and intelligent transportation. 4D millimeter wave radar chips are mainly MMIC chips. The full name of MMIC radio frequency chip is monolithic microwave integrated circuit, which is a chip containing multiple functional circuits and is mainly responsible for the modulation, transmission and reception of millimeter wave signals and the demodulation of echo signals.
