According to this study, the global 4G LTE market size will reach US\$ 148140 million by 2031.

4G LTE is a type of 4G technology, and it delivers the best performance and speeds available today. If you use a lot of data each month or rely on your smartphone or tablet to browse the Internet, 4G LTE is usually the best choice. 4G LTE is about ten times faster than the older 3G technology, so the difference in speed is often quite noticeable when users switch from 3G to 4G LTE.

The speed does depend on the strength of your signal and the network load. 4G LTE networks are so fast that when using one on your phone, your Internet experience is about as good as it is on a home computer connected to a modern wireless broadband network.

However, weak network strength and fragmented & limited spectrum are the major factors which are hindering the growth of 4G LTE Market.

The major growth driver of 4G LTE Market includes growing technology advancement in telecommunication industry, growing demand for high speed communication network and growing development of smart devices among others.
