LCos (Liquid Crystal on Silicon) projection technology is a new type of reflective micro LCD projection technology. It combines the design concepts of LCD and DLP, using semiconductor CMOS integrated circuit chips as the substrate of reflective LCD. A thin layer of liquid crystal silicon is coated on the CMOS chip, and the control circuit is placed behind the display device, thereby improving light transmittance, achieving greater light output and higher resolution. Currently, LCoS technology has made a breakthrough, and new products will be launched in the next two years and become a strong competitor of DLP technology.
