The 4K Pulse Tube Refrigerator (PTR) is a type of cryogenic refrigerator used primarily in scientific research and industrial applications where ultra-low temperatures are required. The PTR operates on the principle of the Gifford-McMahon cycle or the Stirling cycle. It uses a high-pressure gas to drive a pulse tube, which is a hollow tube filled with a working gas (usually helium). The gas undergoes a cyclic compression and expansion process, leading to the transfer of heat from the cold end (where the gas expands and cools) to the warm end (where the gas compresses and heats up).

The global 4K Pulse Tube Refrigerator (PTR) market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
