Digital signage is a specialized form of video broadcast aimed at a very narrow niche audience in which video or multimedia content is displayed for informational or advertising purposes. A digital sign usually consists of a computer or playback device connected to a large, bright digital screen such as a commercial-grade LCD or plasma display. This report mainly focuses on 4K signage.

4K Digital signage have broad end-use applications, it is widely used in department stores, schools, libraries, office buildings, medical facilities, airports, train and bus stations, banks, auto dealerships and other public venues. It is also commonly used in corporate, employee-facing environments. If the display is connected to a computer, the data on the screen can be updated in real time by means of an Internet or proprietary network connection. The system can employ multiple screens if an extra-large display is required. The increasing demand for digital signage in public and commercial sectors, advancements in technology offerings and rising infrastructure are the key driving factors for the digital signage market.
