According to this study, the global 5-in-1 eDrive system market size will reach US\$ 7891 million by 2031.

A 5-in-1 eDrive system is an integrated electric vehicle (EV) powertrain that combines five essential components into a single, compact unit. This high level of integration enhances efficiency, reduces weight and space requirements, and simplifies vehicle assembly, leading to improved performance and cost savings.

The integrated components of the five-in-one electric drive system of different manufacturers are different. The common composition methods are as follows:

Integration of motor, reducer, electronic control, driver and brake: This integration method integrates the motor, the core component of vehicle power output, the reducer that reduces speed and increases torque, the electronic control unit that controls the operation of the motor, and the driver and brake. Through this high degree of integration, excellent energy efficiency and rapid response are achieved, which can significantly improve the vehicle's cruising range and acceleration performance.

Integration of drive motor, MCU, OBC, DC-DC and reducer: Taking the five-in-one integrated electric drive of Dongfeng Fengshen SKY EV01 as an example, it integrates the drive motor, motor controller (MCU), on-board charger (OBC), DC converter (DC-DC) and reducer. This integration method reduces the connection lines and interfaces between components, reduces the loss of energy during transmission, improves the overall efficiency and reliability of the system, and also saves space inside the vehicle, which is conducive to the overall design and layout of the vehicle.

Integration of motor, inverter, reducer, generator and speed increaser: For example, the five-in-one electric drive system used in Nissan e-power models realizes the modular design of motor, inverter, reducer, generator and speed increaser. This design helps to improve the integration and compactness of the system, making the vehicle's power transmission more efficient, and can also better adapt to different driving conditions and power requirements.

'Five-in-one' electric drive module integration: Taking the 'five-in-one' electric drive module in BYD's eight-in-one electric drive system as an example, it integrates the on-board charger, DC converter, distribution box, vehicle controller, and battery manager. This integration method realizes deeper integration capabilities and also realizes the deep integration of software, hardware, and end-cloud, which helps to improve the overall performance and intelligence level of the system.
