50 Ohm Coax Cable is a type of coaxial cable that has an impedance of 50 Ohms. Coaxial cables are constructed with a central conductor, an insulating layer, a metallic shield, and an outer insulating layer. The "50 Ohm" designation refers to the electrical impedance of the cable, which is a measure of resistance and reactance combined. This specific impedance level is standardized for certain applications, particularly in radio frequency (RF) transmission and data communication systems.

50 Ohm Coax Cables are widely used in the transmission of high-frequency signals, such as in cellular telecommunications, radio and television broadcasting, Ethernet, and other data and signal transmission applications. They are chosen for their efficiency in carrying signals over long distances with minimal loss. The 50 Ohm impedance is especially suited for power transmission and RF applications, making these cables a preferred choice for professional telecommunications systems, amateur radio setups, and various scientific and industrial equipment.

The global 50 Ohm Coax Cable market size is projected to grow from US\$ 4917 million in 2024 to US\$ 7188 million in 2030; it is expected to grow at a CAGR of 6.5% from 2024 to 2030.
