The 58 thermal printer is a small ticket printer that uses direct line thermal technology and has a printing width of 58mm. The working principle of the 58 thermal printer is based on thermal printing technology, where semiconductor heating elements are installed on the print head. When these heating elements are heated and come into contact with the thermal printing paper, a chemical reaction can occur on the coating on the thermal paper, resulting in the printing of corresponding graphics and text. This chemical reaction occurs at a certain temperature, and high temperature will accelerate this chemical reaction. 58 thermal printers are widely used in various fields such as commerce, finance, healthcare, and transportation. In retail stores, the 58 thermal printer can be integrated with the cash register system to quickly print out detailed information about purchased goods; In the catering industry, the 58 thermal printer can be connected to the ordering system, allowing servers to quickly generate and deliver bills to customers; In medical institutions, 58 thermal printers can be used to print medical bills and receipts; In financial institutions, the 58 thermal printer can be used to print deposit vouchers, etc.
