Abstracts

The global 5A Molecular Sieve Activated Powder market size is predicted to grow from US$ 2193 million in 2025 to US$ 2960 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2024, the global market price for activated 5A molecular sieve powder will be US$5,175 per ton, with sales of approximately 416,000 tons. Activated 5A molecular sieve powder is produced by high-temperature calcination of raw 5A molecular sieve powder. Because most of the moisture is lost during calcination, activated 5A molecular sieve powder exhibits strong adsorption capacity, excellent dispersibility, and rapid adsorption. It is widely used in industrial production as a selective adsorbent, effectively removing trace moisture and gaseous impurities from materials, preventing bubbles and other quality issues. In some applications, particularly polymer production and gas purification, activated 5A molecular sieve powder can improve product quality without altering the physical and chemical properties of the product. Upstream suppliers include chemical raw material and equipment suppliers, including sodium silicate, aluminum hydroxide (basic raw materials), clay (binder), and calcination kiln manufacturers. Typical downstream customers include PetroChina, BASF (petrochemical n-alkane separation), Midea, Daikin (refrigerant drying), Air Products (industrial gas purification), as well as coatings and pharmaceutical companies. Sales are through chemical distributors.

United States market for 5A Molecular Sieve Activated Powder is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
