Fiber optic cable is a cable containing one or more optical fibers that are used to carry light. The optical fiber elements are typically individually coated with plastic layers and contained in a protective tube suitable for the environment where the cable will be deployed.

5G networks are expected to connect people with things through smart networks and applications, all of which will generate huge amounts of data. It tries to provide the best performance among all performance indicators while connecting more devices. The advancement of these networks will drive and inspire a new wave of computing and technological innovation that will change the way we live and work. But before 5G becomes a reality, network infrastructure must be established to support billions of devices and trillions of terabytes of data that will flood the network.
