The global 5G Integrated Small Base Station market size is predicted to grow from US\$ 4625 million in 2025 to US\$ 38810 million in 2032; it is expected to grow at a CAGR of 36.2% from 2026 to 2032.

The 5G integrated small base station is a compact, highly integrated communication device used to support the deployment of 5G communication networks. Compared with traditional large base stations, integrated small base stations have smaller size, more flexible deployment methods, and higher network capacity and coverage. This enables them to meet the needs of high-density, high-capacity 5G communications, especially in urban areas, large-scale event sites and the connection of Internet of Things (IoT) devices. As 5G networks develop, integrated small base stations will be deployed more densely in cities and densely populated areas to provide better network coverage and capacity. Overall, 5G integrated small base stations will play a key role in the development of 5G networks, supporting new application scenarios and services, and providing users with a faster and more reliable communication experience.
