The global 5G Intelligent Inspection Robots market size is predicted to grow from US\$ 4965 million in 2025 to US\$ 9232 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

5G intelligent inspection robots are mobile robot systems equipped with multiple sensors (high-definition cameras, infrared thermal imaging, lidar, environmental and equipment status sensors, etc.), autonomous navigation and obstacle avoidance systems, and real-time interconnection with cloud platforms via 5G networks. They are used to replace or assist manual labor in routine and emergency inspections in scenarios such as power substations, petrochemical plants, factory workshops, rail transit, and park security. They can automatically move according to preset routes or remote commands, collecting real-time data on equipment appearance, temperature, sound, and gas concentration. Through edge computing and AI algorithms, they identify and alert on anomalies, and transmit inspection videos, images, and data back to the monitoring center with low latency, achieving 24/7 inspections with minimal or no human intervention. This reduces the risks of high-risk operations for frontline personnel while improving inspection efficiency and the timeliness and accuracy of fault detection. In 2025, sales volume was 145,000 units, with an average price of US\$35,000, total production capacity of 170,000 units, and a gross profit margin of 35%.

From the demand side, 5G intelligent inspection robots capitalize on the dual trends of 'less manned/unmanned operation' and 'inherent safety.' On the one hand, the on-site environments in industries such as power grids, petrochemicals, steel, mining, rail transit, and data centers are either high-risk (high voltage, high temperature, flammable and explosive) or high-intensity (24/7 continuous operation), leading to a shortage of frontline maintenance personnel and a significant gap in experience. The traditional

'human with camera + thermometer' inspection mode is increasingly unsustainable. On the other hand, regulators are constantly strengthening requirements for the frequency of safety production and hazard investigation, while enterprises are being assessed on 'cost reduction and efficiency improvement,' making it impossible to add manpower indefinitely. In this context, a 5G inspection robot that can automatically patrol lines, automatically collect images/measure temperatures/listen to sounds, automatically compare historical data, and remotely transmit it back essentially replaces 'human time' with 'machine time,' especially in scenarios such as unmanned substations, nighttime inspections of petrochemical plants, and tunnels/power distribution rooms/large computer rooms, has transformed from a 'new toy' into a necessary option in planning.

From the supply side, this market, while seemingly just 'robots + 5G modules + cameras,' is rapidly shifting from 'selling equipment' to 'selling scenario solutions + data services.' Low-end manufacturers primarily focus on general-purpose chassis and simple cameras, competing on price and appearance. The real bargaining power lies with those who can package chassis (wheeled/tracked/rail), sensor combinations, 5G/MEC communication, algorithm models, and industry know-how: for power systems, this means automatically identifying meter readings, porcelain insulator cracks, switch positions, and abnormal temperature rises; for petrochemical/chemical systems, it means identifying leaks, unusual noises, liquid accumulation, and hazardous gases; and for rail transit, it means inspecting outdoor equipment, protective facilities, and foreign object intrusion. Going further, it involves integrating robots into enterprise operation and maintenance platforms and work order systems, connecting 'inspection results ? alarm ? dispatch ? closed loop,' and even charging based on 'annual service fee/number of inspections.' Whoever can delve deeply into 1-2 high-value industries and transform robots from one-time purchases into long-term subscription-based inspection capabilities will have the opportunity to obtain higher unit prices and more stable recurring income in this wave of industrial intelligence.
