The 5G millimeter wave coupling shielding box is an electromagnetic shielding test equipment designed specifically for the 5G millimeter wave frequency band (usually 24.25GHz to 52.6GHz). Its core function is to build a closed cavity through highly conductive metal materials (such as aluminum alloy or steel), and use the reflection and absorption characteristics of electromagnetic waves on the conductor surface to isolate the internal test environment from external electromagnetic interference, while suppressing internal signal leakage. Its shielding effectiveness is usually required to reach more than 70dB in the millimeter wave frequency band to ensure that the purity of the electromagnetic environment in the test area meets the research and development and production needs of 5G equipment.
