According to our LPI (LP Information) latest study, the global 5G Non-Standalone (NSA) Architecture market size was valued at US\$ million in 2023. With growing demand in downstream market, the 5G Non-Standalone (NSA) Architecture is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global 5G Non-Standalone (NSA) Architecture market. 5G Non-Standalone (NSA) Architecture are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of 5G Non-Standalone (NSA) Architecture. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the 5G Non-Standalone (NSA) Architecture market.

The first rollout of 5G networks are NSA deployments that focus on enhanced mobile broadband to provide higher data-bandwidth and reliable connectivity. They are in line with the 3GPP specification that early rollouts of 5G networks and devices be brought under NSA operation – meaning, 5G networks will be aided by existing 4G infrastructure. So service providers who want to be first to offer 5G speeds will start with NSA and, once 5G coverage is established, implement standalone 5G.

5G is a key and cross-age technology that opens the era of the Internet of Everything, and all countries are grabbing market share. The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the

number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

China is a leader in 5G technology. According to the latest statistics from the Ministry of Industry and Information Technology, China newly added 887,000 5G base stations in 2022 (currently reaching 2.312 million, accounting for more than 60% of the world's total), and 110 cities in China have reached gigabit city construction standard. According to the Digital China Development Report (2022) released by the State Internet Information Office, by the end of 2022, China had built a total of 2.312 million 5G base stations, with 561 million 5G users, accounting for more than 60% of the world.
