The global 6 Axis CNC Bending Machine market size is predicted to grow from US$ 67.3 million in 2025 to US$ 98 million in 2031; it is expected to grow at a CAGR of 6.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

6-axis CNC bending machine is a high-precision and high-efficiency sheet metal processing equipment, which is widely used in the bending and forming of metal sheets. The so-called '6-axis' means that the equipment is equipped with six independently controllable motion axes, usually including Y1, Y2 (left and right synchronous control of the upper mold), X-axis (back gauge moves forward and backward), R-axis (back gauge moves up and down), and Z1/Z2 axis (back gauge moves left and right or adjusts). Through the coordinated movement of these six axes, the press brake can achieve precise positioning and repeated processing of complex parts, improve bending accuracy, automation and production flexibility. Combined with the program control of the CNC system (CNC), the operator only needs to input the processing parameters and process flow, and the machine can automatically complete multiple bending processes, which is especially suitable for sheet metal manufacturing fields with mass production and high precision requirements.

United States market for 6 Axis CNC Bending Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
