The global 6.6kW Bidirectional Vehicle OBC market size is predicted to grow from US\$ 1894 million in 2025 to US\$ 7434 million in 2032; it is expected to grow at a CAGR of 22.0% from 2026 to 2032.

The 6.6kW bidirectional vehicle OBC(On-Board Charger) is a charging device with a power of 6.6 kilowatts, which can realize the charging and discharging functions of electric vehicle batteries. It not only supports charging the battery from the external power grid, but also can reversely transmit the power of the on-board battery back to the power grid or power the on-board load. It has the characteristics of bidirectional energy flow, supports smart grid and Internet of Vehicles applications, and improves energy utilization efficiency.

The future development trends of the global 6.6kW Bidirectional Vehicle OBC market are primarily in the following areas:

1. Technology Upgrade and High Integration

In the future, 6.6kW bidirectional on-board OBCs will evolve towards higher power density (e.g., 11kW/22kW) and modular integration (e.g., three-in-one OBC, DC-DC, and PDU). The use of silicon carbide (SiC) and gallium nitride (GaN) devices will further improve efficiency while reducing size and weight.

2. Expansion of V2X Application Scenarios

With the growing demand for smart grids and energy management, vehicle-to-grid (V2G), vehicle-to-home (V2H), and emergency power supply (V2L) will become

mainstream applications, driving the transformation of OBCs from a single charging function to an energy exchange hub.

3. Differentiated Competition in Regional Markets

European and American manufacturers (e.g., Infineon and Bosch) dominate high-end technology, while Chinese manufacturers (BYD and Huawei) are accelerating their penetration into the mid-range market thanks to cost advantages and rapid product iterations. Furthermore, policy drivers (e.g., China's 14th Five-Year Plan) will further stimulate the rise of the domestic supply chain.
