The global 6µm Double Light Copper Foil market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A 6µm double-light copper foil refers to a specific type of copper foil with unique characteristics. 6µm indicates the thickness of the copper foil. This is an extremely thin and lightweight copper foil. The term "double-light" typically refers to the foil's weight or mass per unit area. It suggests that this copper foil has a relatively low weight or mass per unit area, making it lightweight. It may have a thinner copper layer compared to standard copper foils.

The global market for copper foil was influenced by several key trends and developments. Copper foil is a vital material used in various industries, including electronics, automotive, construction, and energy. The demand for smaller and more compact electronic devices continued to drive the need for thinner and higher-density copper foils. The deployment of 5G networks and the growth of the Internet of Things (IoT) led to increased demand for copper foils in the manufacture of high-frequency and high-speed PCBs. Copper foils for flexible PCBs and flexible displays saw increased demand in applications like smartphones and wearable technology. The automotive industry's shift toward electric vehicles boosted the demand for copper foils used in EV batteries and power electronics. The expansion of renewable energy sources, such as solar and wind power, drove the demand for copper foils in energy storage systems like lithium-ion batteries. Emerging markets, especially in Asia, saw increased demand for copper foils as industrialization and infrastructure development continued. Fluctuations in the global copper market, driven by factors such as supply and demand dynamics, geopolitical events, and economic conditions, influenced the pricing of copper foils.
