7-AAD (7-Aminoactinomycin D) is a fluorescent dye commonly used in flow cytometry and cell biology to assess cell viability and DNA content. It binds to DNA in a stoichiometric manner, allowing for the identification of cells that have lost membrane integrity, a characteristic of dead or dying cells. 7-AAD is excluded from live cells with intact membranes but can penetrate cells with compromised membranes, staining dead cells for analysis. This dye is valuable for distinguishing between live, dead, and apoptotic cells in various research applications, providing crucial information about cell health and viability in experimental studies.

The global 7-AAD market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
