70% isopropyl rubbing alcohol, also known as isopropanol, is a commonly used antiseptic and disinfectant solution. Comprising 70% by volume of isopropyl alcohol and 30% water, this solution is known for its broad-spectrum antimicrobial properties. It is widely utilized in healthcare settings, homes, and industries for disinfecting surfaces, medical instruments, and skin. As a topical antiseptic, it is often applied to minor cuts, scrapes, and abrasions to clean and disinfect the affected area, helping prevent infections. The 70% concentration is considered effective because it allows for slower evaporation compared to higher concentrations, providing more contact time for the alcohol to act on microorganisms. It is essential to note that 70% isopropyl rubbing alcohol is not intended for internal use and should be used with caution on sensitive or damaged skin. Its versatility and efficacy make it a staple in first aid kits and healthcare facilities for general disinfection and wound care purposes.

The global 70% Isopropyl Rubbing Alcohol market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
