The 80 thermal printer refers to a thermal printer with a printing width of 80mm. The working principle of the 80 thermal printer is the same as that of a general thermal printer, both based on thermal printing technology. Semiconductor heating elements are installed on the print head. When these heating elements are heated and come into contact with the thermal paper, a chemical reaction can occur on the coating of the thermal paper, resulting in the printing of corresponding graphics and text. 80 thermal printers are widely used in various fields such as commerce, catering, retail, healthcare, and transportation. In the catering and retail industries, 80 thermal printers can quickly print out cash receipts, order information, and more; In the medical industry, it can be used to print medical bills, prescriptions, etc; In the transportation industry, it can be used to print traffic tickets, etc.
