## Abstracts

The global 800G DAC High-Speed ??Copper Cable market size is predicted to grow from US\$ 213 million in 2025 to US\$ 832 million in 2032; it is expected to grow at a CAGR of 23.5% from 2026 to 2032.

The 800G DAC (Direct Attach Cable) is a transmission cable designed for ultra-short-distance, high-speed interconnects within data centers. It features high-speed transceiver modules (such as QSFP-DD800 or OSFP) directly soldered to both ends of a copper cable; by eliminating the need for opto-electrical conversion, it offers advantages such as low latency, low power consumption (being passive), and low cost. Consequently, it serves as an ideal choice for connecting servers and switches within the racks of AI computing centers.

The industry chain for 800G DACs represents a deep integration of high-frequency materials science and precision manufacturing processes. The upstream core lies in high-performance bare wire and precision connector components; specifically, high-frequency silver-plated copper alloy wire, low-loss foamed insulation materials, and high-performance shielding foil are the critical factors determining signal attenuation. As single-channel data rates evolve toward 112G and 224G, the requirements for wire impedance consistency have become nearly exacting; consequently, the field of top-tier high-frequency cabling continues to be characterized by significant technical barriers.

Market prices for 800G DAC high-speed copper cables generally range from US\$93 to US\$205 per unit, with specific pricing primarily influenced by cable length and interface form factor. Annual sales volume reaches the million-unit level, while the industry's gross profit margin typically falls within the 20% to 30% range.

United States market for 800G DAC High-Speed ??Copper Cable is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
