The 8L hydrogen internal combustion engine is a medium-sized hydrogen fuel cell engine with a displacement of 8 liters. It employs low-pressure direct injection technology, injecting hydrogen directly into the cylinder to mix and burn with air, driving the piston to generate power. Developed by Weichai Power, this engine represents the advanced level of domestic hydrogen internal combustion engine technology. The product is priced at approximately US$14,000 per unit, with global sales of approximately 130,000 units.

The market development of the 8L hydrogen internal combustion engine shows a clear trend of upstream and downstream synergy. Upstream involves hydrogen production and storage, constrained by hydrogen sources and infrastructure construction; midstream manufacturing focuses on injection systems, ignition control, and safety management, with companies improving capacity and efficiency through intelligent production lines; downstream applications are mainly concentrated in urban logistics, sanitation, and port transportation, and will integrate with fuel cells and hybrid power technologies in the future, promoting the diversified development of the hydrogen energy ecosystem. Overall, this market possesses good growth potential and profit margins.

United States market for 8L Hydrogen Internal Combustion Engine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
