Ablation Technologies is the treatment that destroys tumors or unwanted material without affecting other body tissues or organs. Because of poor health or reduced organ function, these techniques are widely used to treat cancer, cardiovascular and other chronic diseases. In the treatment of chronic diseases, medical ablation plays the prime role in the removal or complete destruction of abnormal tissue. Medical ablation can be done without surgery by insertion of the probe or a needle through the skin into the tumor. Ablation refers to a minimally invasive surgical procedure for the destruction or removal of abnormal tissues that can cause life-threatening conditions such as cancer, atrial fibrillation, and others. The most common types of cancers treated by medical ablation are kidney (renal) cancer, liver cancer, and lung cancer.

Global Ablation Technologies key players include Medtronic, AtriCure, Dornier MedTech, Boston Scientific, AngioDynamics, etc. Global top five manufacturers hold a share about 50%. North America is the largest market, with a share about 40%, followed by Europe, with a share about 30 percent. In terms of product, Radiofrequency Ablation is the largest segment, with a share about 55%. And in terms of application, the largest application is Cancer, followed by Cardiovascular Disease, Pain Management, Ophthalmology, Gynecology, Orthopedic Treatment, etc.
