Abrasion-resistant rubber products refer to industrial rubber products manufactured using natural rubber or synthetic rubber compounds specifically formulated to provide high resistance to abrasion, wear, tearing, and impact. These products are designed to protect equipment and extend service life in harsh operating environments involving bulk material handling, sliding wear, and impact wear, and are widely used in mining, cement, steel, power generation, ports, and chemical industries.

The upstream of the abrasion-resistant rubber products industry mainly includes suppliers of natural rubber, synthetic rubber (such as SBR, BR, NBR), carbon black, vulcanizing agents, and various rubber additives. The midstream consists of manufacturers of abrasion-resistant rubber products, producing rubber liners, rubber sheets, rubber linings, and rubber composite wear products. The downstream industries mainly include mining, cement, steel, power generation, ports and bulk material handling, and chemical industries, where heavy wear protection is required.
